Szentendre,  
Hungary, 2015

wastewater treatment

A-Híd Co.

clay pipe DN 200

municipal wastewater  
treatment and network

51 km

A new wastewater treatment plant was built in the city. The plant is serving the agglomeration as well (7 settlements) and the network that connects the cities had been built by clay pipes provided by Pureco. Pureco provides sustainable products for sustainable water treatment solutions. Vitriified clay pipes comply with the most stringent environmental standards. A long service life in combination with low maintenance and repair costs adds to its economical viability. These benefits can be reaped over generations. With their expected life span of over 100 years, vitriified clay pipes are kind on resources and keep the costs of maintenance and repairs to a minimum.
