

ODORLESS INDUSTRIAL ACTIVITIES, WASTE MANAGEMENT WITHOUT ANY SMELL

Subotica, Serbia, 2017

IBI S.p.A.

landfill

air treatment

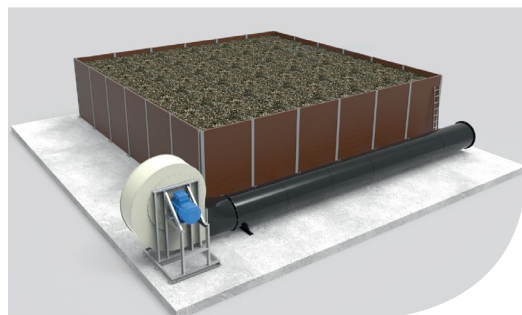

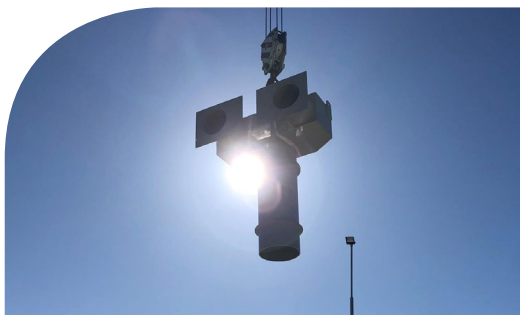

Ventus L Biofilter

20,000 m³/h

The regional waste management centre in Subotica is ready to manage the waste produced by 260,000 people in the region, focusing on the long-term goal generating a new approach towards waste management that enables economic re-evaluation of waste while at the same time ensuring the highest level of health and environmental protection for people. Cleaning 20.000 cubic meter polluted air per hour does not mean that a huge concrete equipment was placed by the works of art, VENTUS L needs only the flat concrete basement and other installations can be built up several days later. The system is working automatically, only supervision is required. We are very proud of being involved to this significant environmental development project on a special field of air protection, treating the odour air with our innovative equipment, the VENTUS biofilter.
