ENVIA TRP patented solution for oil separation

327 km

We installed ENVIA TRP oilsepartors along the highway specific section. The product was developed by Pureco for filtering and retaining the contaminants washed away by stormwater, flowing down from linear engineering structures such as roads, motorways, parking lots. This solution is unique in the market of stormwater purification. We are proud of this project because the pollutant retention in run-off rainwaters and storm water pre-treatment along road infrastructures is absolutely crucial and with this project we can contribute to healthy and clear surface water nearby the site.

stormwater purification / long-life solution / patented product / can be installed into open ditches / less earthwork / easy to install and to operate
